### 1. Disassembly

Using a T20 Torx® Plus bit, remove existing OE plastic shift cup and discard.

### 2. Installation & Assembly

- Using a T20 Torx® Plus bit, install the correct size Sonnax aluminum shift cup.
- Ensure Sonnax shift cup is properly rotated so the tabs will retain the valve body components securely.

**NOTE:** When installing Sonnax aluminum shift cup in the main pressure regulator valve, install the O-ring into the cup groove first. Lubricate the plug and bore with assembly lube or ATF prior to installing shift cup into the bore.

**CAUTION:** When removing the pressure regulator control valve, a special tool and specific procedures are required. Full instructions are provided with the Sonnax replacement plug **119940-22** and accompanying tool kit **119940-TL9**.
