## SONDAX PERFORMANCE HIGH PERFORMANCE TRANSMISSION PARTS

#### Instructions

## Line Pressure Booster Kit

- Large Ratio Boost Assembly
- Pressure Regulator Spring

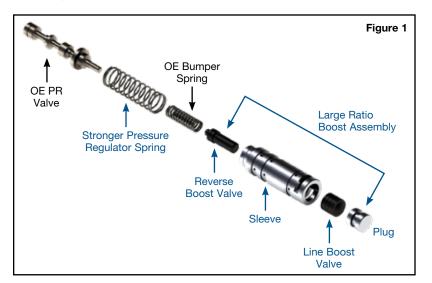

#### 1. Disassembly

Discard the original boost sleeve/valves and large diameter pressure regulator spring. Retain the OE pressure regulator valve, bumper spring and retaining clip.

#### 2. Installation

- a. Install the original small bumper spring and the Sonnax stronger pressure regulator spring.
- b. Install the Sonnax boost assembly with the open end toward the two springs, carefully push the sleeve assembly into the valve body (Figure 1).
- c. Install the retaining clip.

LINE PRESSURE BOOSTER KIT 4T65E-LB1

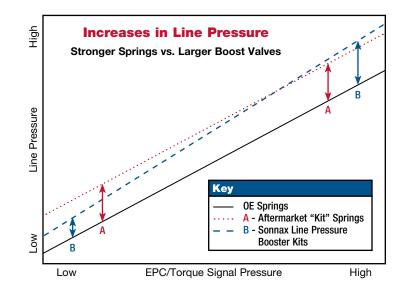

#### Instructions

#### **The Prescription for Optimum Pressure**

Stronger pressure regulator springs raise pressure equal amounts at idle and maximum pressure. Many aftermarket "kit" springs are a compromise, raising pressure too much at idle and not enough at maximum pressures (**A** in graph). Larger boost valves, on the other hand, have a progressive effect on pressure, changing the rate of pressure increase (**B** in graph).

The Sonnax large ratio boost valves and stronger pressure regulator springs are designed to work together. This is an ideal combination: smooth engagements and lower load on the pump at idle, but a greater increase in pressure as the transmission is worked harder.

## **Pump Tech**

## **Good Pressure Depends on a Good Pump**

#### **Verify Pump Specifications**

Excess clearance equals low pump volume and pressure.

Slide End Play	.0003–.0016"
Rotor & Vane Endplay	.0020–.0033"

#### **Check for Wear**

- Check with feeler gauge and straight edge over pump face, or with Plastigauge and bolt complete pump together. Too loose = low pressure. Too tight = no line rise, slide is stuck. To check, remove all pump parts and seals, assemble halves with just the pump slide and shake. You should hear pump slide moving inside.
- Carefully check torque signal regulator valve under EPC solenoid. Sticking, binding or wear will cause low line pressure.
