

Extreme Duty Forward Clutch Hub Kit

Part No.

34322-02K

- Bearing
- Hub

NOTE: Not compatible with '64-'66 TH400 main shafts with major diameter of spline about .980". To use the Sonnax hubs in these early units a 67'-later main shaft with major diameter of spline about .970" must be used.

GM TH400, TH425, 4L80-E, 4L85-E

WARNING: Compared to OE or other replacement forward clutch hubs, this hub and bearing combination has an additional .025" thickness designed-in to reduce endplay and provide further endplay adjustment options.

NOTE: No machining is required for typical installation.

NOTE: This forward clutch hub and bearing combination shifts the support of the forward clutch hub from the main shaft to the direct housing and sun gear shaft.

NOTE: Preassemble unit to check and set endplay before final transmission assembly.

Directions

- Stack bearing and forward clutch hub onto direct clutch housing.
- Place bronze washer on top of forward clutch hub.
- Place forward clutch housing on top of bronze washer.
- Install pump cover and gasket.

NOTE: For 4L80E, install necessary overdrive components to allow endplay check.

- Check front end play. Ensure output shaft is pre-loaded forward when checking front endplay. See front endplay selective washers and specifications (**Figures 1 & 2**).
- If endplay is too tight, material can be removed from following locations as needed.
 - Front of direct clutch housing
 - Rear of forward clutch hub
 - Rear of forward clutch housing
