

Input/Counter Drive Bearing

Part No.

323232-A

NOTE: Also fits Mitsubishi F1CJB.

Jatco/Nissan JF015E (RE0F11A)

NOTE: Early OE bearing was sealed. As the updated Sonnax bearing uses an open design, a slight case modification is necessary to guarantee adequate bearing lubrication.

1. Chamfer lip of case behind bearing cup with a grinding tool (**Figures 1 & 2**). Ensure chamfer is lined up with bore below (**Figure 3**).
2. Thoroughly clean all chips.
3. Install Sonnax inner bearing race oriented as shown, then install bearing (**Figure 4**).
4. Suggested bearing endplay is .005-.020." If OE bearing used shim(s), they can be reused or discarded as needed to maintain tolerance.
